Manual

Rail 860

DIAZ | SUNPROTECTION

Installation of the brackets

1 Put the ceiling brackets at an equal distance from each other over the entire width of the rail.
Make sure the bracket turns close to the ceiling, so there is barely any play between rail and ceiling.

Make sure the ceiling brackets are placed in one line and level.

Installation of Twist curtain

1 Curtain holders are fitted to the rail, to which you can attach two hooks from the curtain.
Start at the end where the package is, by attaching two hooks to the curtain holder.

2 Next, attach the remaining hooks to the runners.

3 To create a neat final pleat, attach two more hooks to the curtain rail.
