Manual

Roller blind easy

DIAZ | SUNPROTECTION

Description of the parts

1. Plastic end caps
2. Brackets
3. Operation side
4. Operation chain
5. Hem bar

Installation of the brackets

1 First draw the place of the brackets onto the ceiling or wall. Make sure the brackets are placed at the exact finished width of the roller blind.

2 Screw the brackets to the ceiling or wall. Always make sure that the brackets are installed in one straight line.

It's very important that the brackets are installed at level, when this isn't the case the fabric will roll into the brackets.

Installation of the blind onto the brackets

1 Slide the plastic covers over the screws of the metal brackets (figure 1).

2 Now hook the roller blind over the edge of the bracket on the operation side (figure 2).

3 Push the spiral spring on the non operation side (figure 3).

4 Position the roller blind between the brackets till the blind clicks in the hole of the bracket.

Child safety

User manual

By pulling the chain you will pull up and let down the blind. Make sure the fabric isn't pulled down lower then the commanded heights, otherwise the fabric will detach from the tube and will eventually fall off.

Take down the roller blind

1. Use a screw driver to push the spiral spring to the inside of the blind. (figure 4)

2. Slide the roller blind out of the brackets.
