MANUAL
ROLLER BLINDS

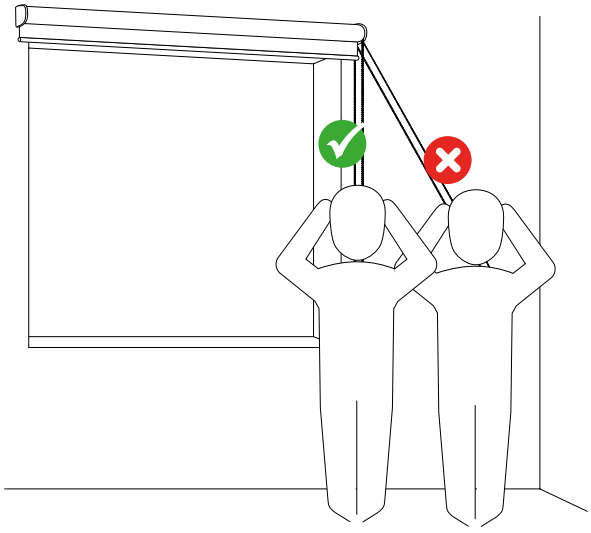

Read this manual carefully before using the product
so that you can enjoy your roller blind to the maximum.

MAXIMUM UNROLLING

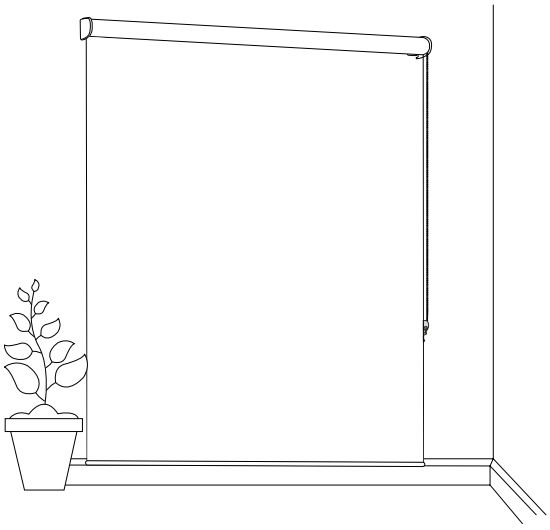

Do not unroll roller blinds further
than the ordered height!
This is to prevent the fabric from
falling off the tube.

COMMAND

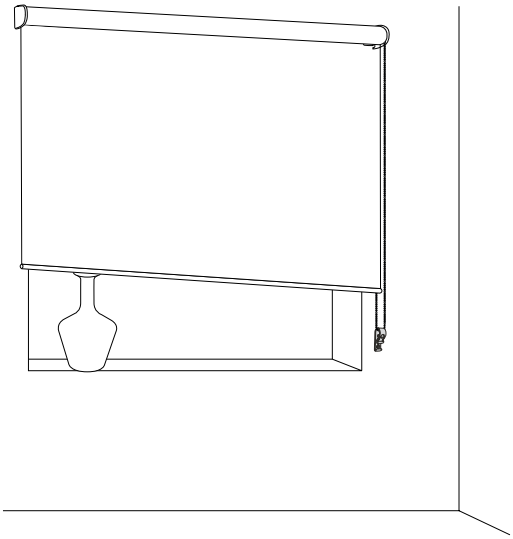

DAMAGE DUE TO CONTACT

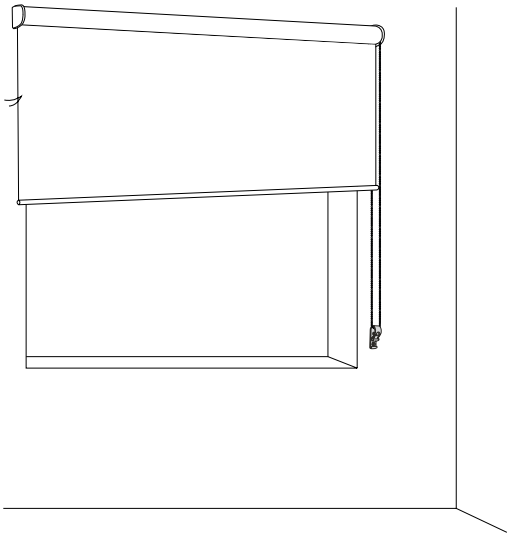

When the fabric comes in contact with an object while rolling up, the fabric may fray. It is important to cut off these threads as soon as possible. This is to prevent the fabric from fraying even further.

OBSTACLES

Make sure the fabric is not obstructed by any object or the window sill. This is to prevent the fabric from falling off the tube.

DAMAGE DUE TO DIAGONAL ROLLING

When the fabric is damaged or when it pulls up diagonally, inform your dealer immediately and stop using the roller blind.
